

## Origami tips

Pages of magazines are a great substitute for origami paper as it is lightweight yet strong.

You will need to make each sheet a square. You can do this by folding two contiguous edges (which are straight) together to form a triangle, then cut off the extra part of the page. You can take this first square and trace it onto a cereal box or piece of cardboard to make a template to cut future pages.

Be sure to crease each fold to make a sharp flat edge. The edge of a pencil or the bowl of a spoon makes a helpful tool to save wear and tear on your fingers.
